Final year school project about dyslexia

For my final year school project I have developed a web-based dyslexia test that is language independent more information is provided below.

Information needed to complete the test :

Link :	language-agnostic-dyslexia.mayanir.ch
Password :	I@DbIstr91
Recommended environment :	• **Good internet connection** • **Minimal background noise**
Recommended browsers :	• **Chrome** • **Microsoft Edge** • **Safari**
Time :	~ 10 min
Things to keep in mind :	Part of this test will use a sound recognition : • **Microphone permission** must be **enabled** • The **sound recognition AI** is not perfect it does **make mistakes** (I will keep this in mind when I analyse the data)

Project Details

My Background

My family is english but when I was young I moved to Switzerland where I followed my education in French. I struggled with writing and reading but teachers thought it was because I was bilingual. It was only when I was 15 years old that I discovered that I was dyslexic

Goals

I wanted to help others that were in the same situation as I, which is why I developed a language independent dyslexia test based based on the work of Elbro C., Daugaard H. T., and Gellert A. S. (2012) "Dyslexia in a second language?—a dynamic test of reading acquisition may provide a fair answer", Annals of Dyslexia 62:172–185.

Who I need

To evaluate the effectiveness of my test I need as many people to complete it whether they are dyslexic or not, monolingual or multilingual, and of all ages.
